

PROJECT TO SUPPORT BUILDING A LIVESTOCK AND GARDEN MODEL IN CO-TU PEOPLE VILLAGE

Pa Cang Village of Co-Tu residents now receive electricity and water. Many of the families have by habit grown crops and raised livestock for decades. Each household has a garden area of over 500m², yet remains almost empty; not many plants nor do they currently have livestock. The current technology and skills for both gardening and the raising of stock are unknown to these groups living here.

This project aims to instruct practical knowledge along with the skills for them to raise livestock and build their own family gardens. As a result, we would look forward to effectively increasing the living standards and social improvements of the community. We would believe this will contribute to the increase to a cleaner environment as well as to their health and safety of this village.
